Field Trip Saturday June 8th Monitor your local fungi

Meet at Shell Service Station Henty Hwy Portland **Saturday 8th June 9.30am**

Destination to be advised.

This is a session for people who are keen on monitoring their local biodiversity. We will be visiting a local bushland and doing a survey using the Fungimap APP to record both local recognisable fungi and 'lost fungi'. We hope the local community will be encouraged to begin regularly monitoring their fungi to help with understanding and conservation of these important but often ignored species. You will learn how to monitor local fungi and why it is important.

We encourage people who want to come along to the field session to join iNaturalist and load it on their smart phone if they have one.
